

# Managed WiFi from London Systems and Cisco Meraki

## Your perfect business solution

For secure and reliable WiFi access you need commercial grade equipment that has been properly configured and installed. London Systems and Cisco Meraki are the perfect partnership for a robust Managed WiFi solution.

With Cisco Meraki you receive a constant, consistent and robust WiFi service with the expertise of London Systems to configure and maintain it for you seamlessly.

## Stability and coverage

No other WiFi solution provides better coverage, ease of use and reliability which means you never have to experience the frustrations of a WiFi router that simply isn't up to the job.

- **Best of breed.** The Cisco Meraki router is out on its own when it comes to performance, reliability and stability. London Systems provides the best in managed IT support in London and beyond.
- **Centrally managed, remotely.** London Systems will support your Cisco Meraki WiFi solution remotely; no disruption when updates, re-configurations, fixes or changes need to happen.
- **Easily scalable.** Multiple WiFi access points mesh together seamlessly into one network, this includes different locations and we'll configure everything for you.
- **Guest WiFi is easy.** We'll create a guest WiFi for your business visitors, which will be completely isolated from your main business network. This means increased security and much less risk of viruses or malware infecting the corporate network.
- **Enforced security policies.** The Meraki WiFi access point has the ability to enforce security policies on any device attaching to the network. This means we can ensure anyone attaching with an iPad or Android device will have the same restrictions applied as users with standard Windows PCs or laptops.
- **Safe for BYOD.** If you operate a Bring Your Own Device policy, we can ensure no device connects unless it has up to date anti-virus software and if required, we can remotely lock and erase devices.
